FYI-Just heard from OSC in Durango that the county is setting up some kind of notification system (through the JIC) through which we can connect with folks to assess their well so that is coming together.

Subject: Update

Private drinking water wells in the vicinity of Durango, Colorado have been impacted by the spill. Region 8 contractors are working now to sample them and provide alternative sources of drinking water.

Typically, we would notify the public to be in contact with us if they have an impacted well so we can address it.

This information is a heads up so we can think collectively about how to handle this kind of notification. It seems likely that private wells in New Mexico would be similarly impacted, possibly in Utah too. We can discuss this on the call tomorrow. Thanks. Joan
